DESCRIBERE

Safety sandal in a modern blue-black color combination. The upper of the shoe is made of microfiber and perforated along the entire length. The oil-resistant non-slip outsole is made of polyurethane transparent thermopolyurethane. The outsole ensures not only comfort but also maximum safety at every step. The shoes are equipped with a comfortable, perforated inner insole, which guarantees comfort and air circulation inside the shoe. The absorption of energy in the heel area absorbs shocks and reduces the feeling of foot fatigue. Thanks to the safety composite toe cap the footwear meets the requirements of the EN ISO 20345: 2011 standard. This means that the feet are protected against compression with a force of up to 15 kN or the fall of a load of up to 20 kg from a height of 1 m. The feet are also protected from below, thanks to the composite antipuncture midsole. The shoes do not contain metal parts and are equipped with the ESD function. Therefore, it is an ideal model for indoor spaces and sensitive environments, where it is necessary to prevent sparks from electrostatic discharge or for rooms equipped with a safety frame. The footwear will be suitable for employees with a high instep, because thanks to the very comfortable velcro fastening, it is possible to adapt the upper part of the footwear exactly to measure and thus achieve maximum comfort during work.
